COURSE SYLLABUS

I. Course Catalog Description

Principles of Macroeconomics introduces students to fundamental economic concepts and encourages them to consider how those concepts apply to the real world and to their own lives. Students will explore the models of economics, how they portray economic interdependence and market equilibrium, and how they contribute to optimal resource allocation. Students will examine classic macroeconomic issues, such as the effects of government intervention on businesses and individuals. They will evaluate macroeconomic conditions and think about how monetary and fiscal policies affect the corporate world and the overall economy. Students will distinguish between short- and long-run macroeconomic forces and learn how monetary systems influence economic variables.

1. Explain the concepts that make up the foundation of the study of economics.
2. Determine the benefits of economic interdependence using the economic model of comparative advantage.
3. Illustrate market equilibrium using the tools of supply and demand.
